fraction from Gram-negative bacteria for the preparation of an immunostimulating composition that can induce an anticancer immune response. The membrane fraction not only stimulates proliferation of human mononuclear blood cells (immunostimulation) but also induces production of tumour necrosis factor-alpha and interleukin (IL)-12, which are known to have antitumour activity, so that it improves the effects of other co-administered anticancer treatments (chemotherapy or radiation). The membrane fraction is used for treatment and prevention of cancer (particularly of the bladder, prostate, colon or liver) and also
The specification describes the use of

Š

The present sequence encodes a Klebsiella pneumoniae outer membrane protein A (OmpA), designated P40. The enterobacterial OmpA polypeptide, or its fragments, is used for preparing a composition that induces, or increases, the cytotoxic T cell (CTL) response against an infectious agent or tumour cell. Compositions containing OmpA, optionally mixed with or coupled to a suitable antigen or hapten, are used as vaccines for treatment or prevention of infections caused by viruses, bacteria, fungi and parasites or tumors, particularly where associated with an antigen and specifically melanoma. Nucleic acids that encode OmpA (or its fusion with antigens or haptens) are useful as genetic vaccines again for

The protein is an outer membrane protein A (OmpA). The protein is used in pharmaceutical compositions for specific targeting of an active substance to antigenpresenting cells (APCB), especially dendritic cells. OmpA binds specifically to APCs and is internalised by them (in contrast to other protein carriers such as tetanus toxoid). The OmpA protein is used to deliver an antigen or hapten to modify (specifically to improve) an immune response, especially for treatment or prevention of cancers (particularly those that express a associated antigen), representational protein in autoimmune disease, allergy, graft rejection, cardiovascular or central nervous system diseases, inflammation, infection or immune deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 Argaaagcaartricgractgaargcggcrccgaaagaraacaccrggrargcaggrggr

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence encodes a P40 polypeptide of Klebsiella pneumoniae. P40 is an enterobacterial outer membrane protein A (OmpA). It can be associated an immunogen, and used to prepare a pharmaceutical composition for improving the immunological response to the immunogen. The immunogen is selected from cytokines, growth factors or hormones (or their receptors) and/or tumour-specific markers. Compositions containing OmpA induce a strong and specific antibody response. The compositions of the invention are especially useful in vaccines to prevent or treat cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a Klebsiella pneumoniae P40 polypeptide. The protein is isolated from a membrane fraction. The specification describe the use of a membrane fraction from Klebsiella pneumoniae, associated with an antigen or hapten, for preparation of a pharmaceutical composition that directs a Th1, or mixed Th1/Th2 immune response. The composition is used for treatment or prevention of infectious diseases (viral, bacterial, fungal or parasitic) or cancers, most especially infections by paramyxoviruses, specifically respiratory syncytial virus
                                                                                                                                                                                                                                                                                                            ebsiella membrane fraction as adjuvant, for e.g. antitumor or vaccines, to direct a Th1, or mixed, immune response against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 ATGAAAGCAATTTTCGTACTGAATGCGGCTCCGAAAGATAACACCTGGTATGCAGGTGGT

The present sequence encodes a Klebsiella pneumoniae outer membrane protein A (OmpA), designated P40. The enterobacterial OmpA polypeptide, or its fragments, is used for preparing a composition that induces, or increases, the cytotoxic T cell (CTL) response against tumour cells. Compositions containing OmpA, optionally mixed with or coupled to a suitable antigen or hapten, are used as vaccines for treatment or prevention of tumors, particularly where associated with an antigen and specifically melanoma. Nucleic acids that encode OmpA (or its fusion with antigens or haptens) are useful as genetic vaccines again for treating

The protein is soluble in aqueous solvent in absence of detergent. The specification describes a method for the preparation of this polypeptide. The P40 protein binds selectively to antigan-presenting cell, so provides targeting, proliferation and/or expression of molecules by these cells. P40 is used, alone or as an adjuvant, to produce therapeutic compositions that are soluble in absence of detergent, especially when formulated with an antigen or hapten for modulating the host's immune system. Especially, it is used to prepare vaccines, especially antiviral, antibacterial or anticancer (e.g. against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Outer membrane protein A; P40; antigen presenting cell; vaccine; antiviral; antibacterial; anticancer; autoimmune disease; inflammation; graft rejection; cardiovascular disease; immune deficiency; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes an outer membrane protein A (OmpA), designated P40. Enterobacterium OmpA proteins, associated with an immunogenic peptide from respiratory synctytial virus (RSV), are used to prepare a nasal composition that induces a protective response, against RSV infection in the upper and lower (lung) respiratory tract. OmpA potentiates the immune response to some immunogenic peptides, eliminating the need for adjuvants. The method is useful for producing vaccines for prevention or treatment of RSV infections
                                                                                                                                                                                                                                                                                                                                        Outer membrane protein A; OmpA; P40; enterobacteria; nasal composition; respiratory syncytial virus; RSV; RSV infection; lung; respiratory tract;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The patent discloses a new immunogenic complex which consists of (1) an oligo- or polysaccharide found naturally on bacteria, coupled to (2) a carrier protein chosen from (a) the human serum albumin binding protein of Streptococcus, (b) Gram-negative bacterial outer membrane proteins of Streptococcus, (b) Gram-negative bacterial outer membrane proteins (0mp), or (c) fragments of these proteins. The immunogenic complex is useful in a vaccines to protect animals against infection by Salmonella, especially those belonging to antigenic specificity group 0:9, including S. enteritidis, S. panama and S. dublin. A vaccine prepared using an oligosaccharide from S. enteritidis can be used to provide protection against septicaemia caused by S. typhi and against typhoid fever, as well as to protect humans and animals from toxic infections and zoonosis caused by Salmonella of the same serogroup. The carrier proteins enhance the immunogenicity of the oligo- or polysaccharide antigens. Inclusion of additional Salmonella capsule antigens, such as the Vi antigen, increases the vaccine's efficacy against encapsulated bacteria. The present sequence represents a gene coding for LP40, a preferred example of a carrier protein which can be used in the immunocomplex. LP40 is a variant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               protein from the outer membrane protein of Klebsiella
I-145. The gene can be used for recombinant expression of LP40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 AAACTGGGTTGGTCCCAGTATCACGACACCGGTTTCTACGGTAACGGTTTCCAGAACAAC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence encodes a fusion protein comprising a Klebsiella pneumoniae outer membrane protein A (OmpA) designated P40 and a respiratory syncytial virus (RSV) antigen. Bnterobacterium OmpA proteins, associated with an immunogenic peptide from RSV are used to prepare a nasal composition that induces a protective response, against RSV infection in the upper and lower (lung) respiratory tract. OmpA potentiates the immune response to some immunogenic peptides, eliminating the need for adjuvants. The method is useful for producing vaccines for prevention or treatment of RSV infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                   The invention relates to the use of a fragment of a bacterial membrane protein, especially the outer membrane protein from an enterobacterium, e.g. the CompA protein from Klebsiella pneumoniae, in a composition for nasal administration to improve immunity, in mammals, against an antigen or hapten. The antigen or hapten is derived from bacteria and viruses that cause respiratory infections e.g. the human or bovine respiratory syncytial virus. This sequence corresponds to the gene encoding the OmpA protein from Klebsiella. The antigens are shown in AAV44078-Y44149 [AAZ30478-Z30538 for coding sequences). The use of a membrane protein, from a species other than that from which the antigen is derived, induces a protective response against the antigen, even without an adjuvant, since most adults will already be sensitized against the membrane protein, protein, although the membrane protein-antigen product will induce an anti-membrane protein response even in subjects who are not pre-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

The present sequence encodes a recombinant outer membrane protein A, designated rP40. The specification describes a method for the recombinant production of a protein, or its fragments. The method comprises renaturation the protein, after extraction, in the presence of a solution containing one of the detergents Zwittergent 3-14, Zwittergent 3-12 and cotylquocopyranoside, where the protein is not beta-interferon. The protein is especially the outer membrane protein (OMP) from an encobacterium, and is useful as a carrier for delivering antigens or hathogens of the respiratory tract, e.g. respiratory syncytial virus (RSV), (para) influenza, hanta virus, Streptococci, Pheumococci and Meningococci, especially human or bovine RSV. Most adults show an tribody response to the Klebsiella pneumoniae P40, and this presensitisation stimulates the immune response to an antigen/hapten conjugated to the protein
                                                                                                                                                                           g

                                                                                                                                                                                                                                    ઠ
                                          The present sequence encodes a Klebsiella protein. The protein is administered to test the adjuvant effect of zwitterionic detergents. The apecification describes the use of zwitterionic detergents in the preparation of a mucosally administered pharmaceutical composition for inducing or improving the immune response of a mammal towards an antigen or hapten. In presence of zwitterionic detergents, vaccines are effective on mucosal (especially nasal) administration, which has the general advantages of inducing specific IgA production directly at the site of infection, stimulating a systemic IgG-type response (creating a secondary barrier against infection) and being simpler to carry out than administration by injection. The pharmaceutical composition is specifically a vaccine for the treatment or prophylaxis of tumours or viral, bacterial or parasitic infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300

Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element, and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This sequence encodes a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
preparing a vaccine composition against Klebsiella pneumoniae.
